Pro Series Paint Scraper

Pro Series is developed for daily professional use, where reliability, durability and efficiency are essential. The series combines high functionality with robust materials and contributes to consistent results day after day.

Product properties

Flügger Pro Series Paint Scraper 25 mm in stainless steel with an ergonomic 2-component handle. The narrow chisel tip provides precise access to corners, joints and narrow grooves where traditional scrapers have limited reach. Integrated hanging hole for tool walls. Part of the Flügger Pro Series. Suitable for removing paint, filler, adhesive residues, wallpaper and sealant.

- **Effective access to corners and narrow grooves**
- **High scraping power reduces stripping time**
- **25 mm stainless steel blade with 2-component handle**

Product use

Used for removing paint, adhesive residues, wallpaper, filler and sealant from wood, plaster, painted surfaces, window frames, mouldings and profiles.

Cleaning and Maintenance

Clean immediately after use with water or suitable cleaning agents and solvents. Always dry the blade thoroughly after cleaning.

Good practice

Hold the blade at an angle of approximately 45° when scraping out material and performing detail work. Reduce the angle when removing paint for improved control and surface protection.

Please note!

The rigid blade is sharp and designed for high scraping power. Avoid applying excessive force on soft plasterboards or delicate surfaces, as this may damage the finish.

Supplementary Info

Waste disposal: Separate the blade and handle before disposal where possible. The stainless steel blade is 100% recyclable. Dispose of according to local waste regulations.

Country of Origin

Taiwan

Technical Data

Shaft	Ergonomic 2-component handle (PP + TPE)
Roller size	25 mm
Metal ring	Stainless steel
